

IDAHO CONSERVATION DATA CENTER
LIMITED USE AGREEMENT FOR DIGITAL DATA

By signing and returning this document, you agree to the following terms and conditions with regard to the use of digital data from the Idaho Conservation Data Center (IDCDC).

- 1) You are free to make copies of IDCDC data in digital or hard copy form for use or distribution solely within your department, agency, company, or organization.
 - a) Subcontractors may have access to appropriate portions of these data during the course of specific, relevant projects but should not be given a copy of statewide data without first obtaining permission from the IDCDC.
 - b) Subcontractors should not have access to any of the data for work unrelated to your department, agency, company, or organization.
 - c) Beyond these limits, IDCDC data may not be further distributed or sold in any format. Should you be approached by individuals outside your department, agency, company, or organization for the type of data provided by the IDCDC, please refer them to our office.
- 2) As a professional courtesy, we ask that you acknowledge the IDCDC as a source of your information whenever you use IDCDC data in your (a) reports, papers, and publications or (b) maps that incorporate IDCDC graphic elements.

The proper citation for data related to special status animals, special status plants, and plant communities is:

Idaho Conservation Data Center. [year of data export]. Element occurrence record database. Idaho Department of Fish and Game, Boise, ID.

The proper citation for data related to managed areas (i.e., Research Natural Areas, Areas of Critical Environmental Concern, etc.) is:

Idaho Conservation Data Center. [year of data export]. Managed area basic record database. Idaho Department of Fish and Game, Boise, ID.

The proper citation for data related to IDCDC conservation sites is:

Idaho Conservation Data Center. [year of data export]. Site basic record database. Idaho department of Fish and Game, Boise, ID.

- 3) You must recognize that the IDCDC databases are dynamic. Records are added, deleted, and/or edited on a daily basis. Consequently, we strongly advise that you partner with the IDCDC to receive regular (annual or semi-annual) data exports.
- 4) The data often require interpretation and/or synthesis by our staff of botanists, biologists, ecologists, and they are available to provide this level of service. It is your responsibility to ensure the data you obtain from the IDCDC are not misinterpreted or misused.

Please note: The quantity and quality of data collected by the Idaho Conservation Data Center are dependent on the research and observations of many individuals and organizations. In most cases, these data are not the result of comprehensive or site-specific field surveys; many natural areas in Idaho have never been thoroughly surveyed. For these reasons, the IDCDC cannot provide a definitive statement on the presence, absence, or condition of biological elements in any part of Idaho. IDCDC reports summarize the existing information known to the IDCDC at the time of the request regarding the biological elements or locations in question. They should never be regarded as final statements on the elements or areas being considered, nor should they be substituted for on-site surveys required for environmental assessments.
